KAPAS-0001 2

1 a connection depending on the situation with

1 Kawaguchi, Akitsugu; and Katsurada, Yoshie. On a connection in an areal space. Bul. Inst. Politech. Iasi 4 (1949), 369-385.

The authors establish a theory of connections in an areal space by a method which differs significantly from earlier treatments of this subject [see, e.g., E. T. Davies, J. London Math. Soc. 20 (1945), 163-170; MR 8, 96]. The area of an m -dimensional subspace of an n -dimensional space X_n , given by the parametric equations $x^i = x^i(u^a)$ ($i=1, \dots, n$; $a=1, \dots, m$), is defined by an m -tuple integral $\int \dots \int f(x^i, \partial x^i / \partial u^a) d(u^1, \dots, u^m)$, the integrand f being a given function having suitable transformation properties. This gives rise to the so-called areal space A_n^m . The authors confine themselves to the case $n=2$. By introducing a certain intrinsic tensor Λ_{ij} and subjecting it to certain conditions, they succeed in deriving suitable connection coefficients. This gives rise to a theory of torsion and curvature. The curvature tensors may be interpreted in a manner which is similar to the geometrical interpretation of the three well-known curvature tensors of Cartan in a Finsler space.

TITLE: An Analysis of the Functioning of Piles Under Horizontal
Stress (Issledovaniye raboty svay nagruzhennykh gorizonta'-
noy siloy)

PERIODICAL: Gidrotekhnicheskoye stroitel'stvo, 1958,²⁷ Nr 9, pp 37 - 39
(USSR)

ABSTRACT: The authors describe experiments conducted by the Construc-
tional Section of the Gdansk Polytechnical Institute (Po-
land) in collaboration with the Maritime Institute, to de-
termine the stress of a wooden pile driven into the soil.
The stress indicators usually used for testing the metal-
lic constructions were used in this experiment. The ex-
periment is described in detail. The results of the stress,
caused by different loads on the top of the pile, and re-
gistered on the indicators, were transcribed into graph
form (fig. 5) and compared with results obtained by theo-
retical calculation according to the method of D.V. Angel'-
skiy. The comparison showed the similarity of results. The
practical method is recommended for the use of planners of

3089. KAWECKA M. Inst. Onkol., Odd., Gliwice. *Czy rak przedinwazyjny u ciężarnych jest zmianą odwracalną. Is pre-invasive cancer in pregnant women a reversible lesion? POL.TYG.LEK. 1956, 11/13 (583-584)

The behaviour of pre-invasive cancer was observed in 17 pregnant women. In all patients histopathological and cytological examinations were systematically carried out during pregnancy and after delivery. It was found that the pre-invasive cancer diagnosed during pregnancy does not disappear after parturition, but in no case was it established that the pre-invasive cancer may change into an invasive one. The patients were observed for 3 months after delivery. This is a preliminary report. But, already basing on these observations, the author is of the opinion that in cases of pre-invasive cervical cancer in a pregnant woman, the patient should be controlled every month, the pregnancy allowed to proceed to term and after delivery again sections should be taken and the patient treated according to the results found. In no case was the disappearance of the newgrowth observed, therefore pre-invasive cancer in the pregnant woman is an irreversible lesion.

Electroconization was performed in 166 patients with cytological and histological diagnosis of pre-invasive cancer and also in 84 where pre-invasive cancer was suspected histologically. The follow-up of 1 to 5 yr. permits the conclusion that electro-surgical removal of the lesion is sufficient for cure. The following principles however must be observed: Before operation the histological diagnosis must be based on at least 4 biopsies to exclude invasion. The specimen after the conization must be histologically examined in serial sections to confirm the final diagnosis. The patients must be regularly followed up. Electroconization does not exclude the possibility of pregnancy and may be used in the treatment of preinvasive cancer in young women.

A.M., Wrocław. *Mięsakoszpikowica (myelosarcomatosis) w obrazie klinicznym i anatomopatologicznym na podstawie własnego przypadku. Clinical and pathological picture of a case of myelosarcomatosis POL. TYG. LEK. 1955, 10/50 (1614-1618) illus. 6
- A 63-year-old woman showed a rare clinical picture of myelosarcomatosis. There were extensive infiltrations by myeloblasts in the sciatic nerves with low tendon reflexes and pains in the legs which hitherto were attributed to affections of the meninges and the spinal cord. The authors think that this is the second case described.

 Title : Absorption of Sulfur Dioxide in Solutions of Basic Aluminum Sulfate. VII. Mass Transfer Coefficient.

Orig Pub : Przem. chem., 1956, 12, No 1, 35-41

Abstract : Determination of approximate values of overall mass-transfer coefficient k_p , and also of partial mass-transfer coefficients k_g in gas film, and k_c in liquid film, in process of sulfur dioxide absorption in solution of basic aluminum sulfate. It was found that the rate of absorption depends on values of both partial coefficients. It follows therefrom that resistances of gaseous and liquid films are quantities of same order. Communication VI see RZhKhim, 1957, 63039.

Title : Absorption of Sulfur Dioxide in the Solutions of Basic Aluminum Sulfate. VIII. Absorption in a Packed Column. IX. Determination of Mass Transfer Coefficient in Liquid Phase

Orig Pub : Przem. chem., 1956, 12, No 2, 83-86; No 9, 515-519

Abstract : VIII. Measurements of the rate of absorption of SO_2 by basic solutions of aluminum sulfate in a column packed with Raschig rings. It was established that values of the overall mass transfer coefficient K_p depend on the concentration of SO_2 in a gas, wetting density, and the values of Re. Values of K_p increase with the decreased concentrations of

Absorption of sulfur dioxide in solutions of basic aluminum sulfate: IX. S. Bretanajder, W. Kawecki, and A. Wladyslawski (Polytech. Warsaw). *Monatsh. Chem.* 35, 515-19 (1958); cf. C.A. 51, 17341j. The method of measuring the coeffs. of mass transfer by absorption of gases in the stream of liquid flowing out of a capillary tube was modified. The partial coeffs. of mass transfer of the liquid film for the absorption of SO_2 in water and in solns. of basic $Al_2(SO_4)_3$ were detd. The values obtained by this method were much higher than those obtained by the wetted-wall tube method. M. Solomonauky

✓ Effect of the foam layer on bubble absorption of gases
in liquids. S. Bretzanader, W. Kawicki, W. Kotowski,
and R. Gants (Polytech., Warsaw). *Przemysl Chm.* 35,
564-5 (1956).—Sols. of basic Al sulfate were used to absorb
SO₂ by bubbling SO₂ through such sols. In certain cases,
foam formation was not prevented; in others, it was sup-
pressed by the application of H₂O. In the presence of foam,
5-10 times as much SO₂ would be absorbed as in the absence
of foam. 14 references. Werner Jacobson

1. Preparation of Nitrogen Oxides
Nitrogen Oxides are prepared by the reaction of nitrogen with oxygen at high temperatures.

BASED ON OXYGEN AND NITROGEN IN THE TABLE OF ELEMENTS

INFORMATION.

operation are: HNSO₂ soln. should contain 25-30% H₂O, temp. approx. 180°, partial pressure of O₂ 5-10 atm., and vigorous agitation of the binary liquid-gas system. The oxidation reaction takes place in the liquid phase, i.e. O₂ diffuses from the gas phase to the sol. and the liquid products of hydrocarbons are oxidized by HNSO₂. Reaction conditions: pressure 1-10 atm., temp. 20-210°C.

Kawecki Z. Carrying Cables Safety Test on the Kasprowy Mountain Funicular.

„Badanie bezpieczeństwa lin nośnych Kolej Linowej na Kasprowy Wierch w Zakopanem” Przegląd Mechaniczny No 8 1955, pp. 177-182, 9 figs., 4 tabs.

The carrying cables of the Kasprowy Mountain Funicular are tested by three different methods: by a static test, by a dynamic test, and by a strength test. The static test is carried out by means of a special instrument, which enables the operator to determine the degree of sag of the cable and to detect any damage to the cable. The dynamic test is carried out by means of a special instrument, which enables the operator to determine the degree of sag of the cable and to detect any damage to the cable. The strength test is carried out by means of a special instrument, which enables the operator to determine the degree of sag of the cable and to detect any damage to the cable. The results of the static test are of special interest. All external and internal defects in the cables are recorded in a special book.
